De achtergrond, de tekst van de leidraad van de Europese Commissie is als volgt:

The following guiding principles shall be considered for developing infection prevention and control measures and for protocols in hospitality establishments in order to prevent COVID-19 transmission and ensure public health (hereafter referred as 'establishments'):

...

**g) Information for guests**

Guests should receive all necessary information in an accessible manner, including through digital means, prior to arrival and in the place of hospitality establishment, on all current guidance by local public health authorities, as well as specific measures that are put in place and affect their arrival, stay and departure.

Guests should be informed through specific signage (information infographics, including adaptations for visually impaired guests) before the entrance of the establishment of the signs and symptoms of COVID-19, what to do in case they develop symptoms during their stay or within 14 days following departure. The establishment could also provide leaflets with this information.

Establishments should ensure that the contact details of the guests are available in case they are needed for contact tracing. Contact tracing measures should be strictly limited for the purposes of dealing with the COVID-19 outbreak and set up in line with the Common EU toolbox of the eHealth Network on mobile applications to support contact tracing in the EU's fight against COVID-19<sup>22</sup> and the Commission Guidance on apps<sup>23</sup>, ensuring the highest level of privacy and data protection.

...

**j) Potential infections among guests or staff**

...

The necessary cooperation and information regarding fellow guests or staff members who may have been in contact with the case at the establishment from 2 days before and 14 days after the onset of symptoms in the case.

...

If the suspected case is considered a probable or confirmed case then local public health authorities will be notified and will provide advice as to whether contact tracing activities should be undertaken. Contact tracing generally begins immediately after an identified probable or confirmed case is notified and it is usually the responsibility of local public health authorities. Tourism establishments will be requested to cooperate and provide any necessary information regarding fellow guests or staff members who may have been in contact with the case at the establishment from 2 days before and 14 days after the onset of symptoms in the case.
