

Audit and training 5.1.2e /RIVM on Saba

Introduction:

Saba is currently following a containment strategy against COVID-19, requiring all incoming travelers from medium and high risk to quarantine for 10 days. Some essential workers are allowed to do some work activities during quarantine, under strict hygienic measures.

Vaccination against COVID19 have now been approved, and Saba and the islands are, together the MoH and RIVM, are preparing for the vaccination campaigns. As the approved vaccines require very cold storage and this is very different from regular vaccine management, one crucial part in the preparation is an audit of and training on the so-called 'cold chain': receiving and storing the vaccines at the right temperature.

A specialist from the RIVM will visit Saba on January 15th to leave on the 16th.

The following measures and steps need to be taken to make the needed visit as safe as possible:

The regular requirements are valid for time not spent doing work activities:

- A negative PCR max 72 hours old before arriving to Saba
- Wear a mask during transport to and on Saba, and use hand sanitizer frequently
 - On island transport only possible in own car, by approved taxi, or by public health
- Follow quarantine instructions when not at work
 - Stay in hotel room (you are allowed to be on your balcony)
 - No visitors in the room
 - Meals will be delivered to your door

For work related activities the following applies:

- Trainings:
 - Can only be held in (semi)open spaces
 - Queen's hotel has good facilities for this
 - Mr 5.1.2e and people being trained wear masks and practice physical distancing
 - No shared meals
 - Bathroom use by trainer in own hotel room
- Visit current vaccine fridge, located in hospital
 - To be planned after regular clinic hours
 - Mr 5.1.2e wears a FFP2 mask during visit
 - Location of fridge will be ventilated during visit
 - Other staff at hospital will be notified of visit and will try to stay away as much as possible
