Hoi [REDACTED],

Deze stijging zit veel vroeger dan andere jaren, dus het is minder waarschijnlijk dat andere suspects een overheersende rol spelen. Veranderd consultatie-zoekend gedrag van de patienten door angst voor COVID kan hierbij natuurlijk ook een rol spelen.

Ik ga zo naar je bijstandsverzoek kijken.

Groeten en sterkte,

[REDACTED]

Subject: weekly update syndromic surveillance in 5.1.2a & the BES islands including epi wk 38

Dear all,

Enclosed please find the weekly update of the syndromic surveillance in 5.1.2a & the BES islands including epi wk 38.

Curaçao is showing an increased amount above expected values in respiratory disease for the 4th consecutive week. We are in the middle of a wave of local transmission of COVID-19 in Curaçao, but have requested our sentinels to check for a respiratory viral panel in addition to testing for SARS-CoV-2 and what we have picked up so far are some COVID-19, but by far not all of them, while further not picking up any of the usual suspects thus far. The search continues.

In St. Eustatius there was one more COVID-19 case detected in wk 38. We have not received a report from Saba.

I hope to have informed you sufficiently.

Kind regards and a good weekend to all,

5.1.2e
