Totally understand [redacted] and thanks for prompt reply

Will get back with some numbers which I now have - I agree that neut testing for only a subgroups makes sense

Dear [redacted]
Thank you for the project copy info, and yes, I understand the PRNT part,

[redacted]

Best wishes,
[redacted]

Thanks so much [redacted] - CV was perfect
Re PRNT - if you recall, the proposition was to do PRNT for the "challenge" bit of the proposal and to do only MBA for the randomised trial bit.

Dear 5.1.2e

I am indeed almost 100% into COVID, paralyzing I don't know, but indeed a lot of people I need to feed requesting data and advice, etc etc.

Regarding the CV, I have used the previous NZ (Word) document that I received earlier, I tried to be as complete as possible, some items I could not complete, or not quite applicable, hope this is sufficient now to carry on, otherwise help me a little out here out here, as my agenda is currently redhot.

With regard to the serological planning, I have previously informed you roughly on required volumes for MBA testing.

However I was not aware that besides the MBA you also want to proceed with PRN testing, but that's okay.

Hi again 5.1.2e

Hope COVID isn't paralyzing you totally – can only imagine how difficult it must all be in Europe, although also just watched the David Attenborough on NetFlix talking about how productive and ecologically sound the systems for food production are in the Netherlands..

Just trying to tidy up the budget for the full application and also need your CV – apologies it needs to be in a standard format that the HRC requires – if that is a hassle, can probably get someone here to do it from a Word document if you are ok about that. Re budget, I'd like to confirm the cost per specimen for both the MBA and for PRN testing and also to enquire whether you could potentially do the PCR assays of oral swabs (although 5.1.2e didn't like this as a collection method) or would need to try to get that done elsewhere.

Thanks so much

5.1.2e

Hi again [redacted]

Good news is that we got funds for pilot study for the larger grant and so will be doing something first half of 2021
I am re-applying for the study involving the babies and mothers (long story) but key Q is what is the minimum volume of plasma or serum you require for MBA for M, M and R

thanks so much

[redacted]

PS have had some e mails to and fro with [redacted] and would be great to have his technical advice on this going forward
