

COVID-19 vaccination registry in Spain

NITAG Collaboration Webinar, 17 November 2020

Responsibilities regarding immunisation

Population Spain ≈47,026,000

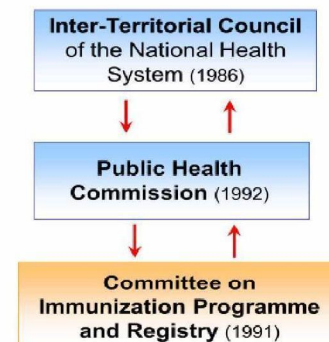

Regions (since 1979-1985)

- Establishment and management of the immunisation programmes
- Procurement, distribution and administration of vaccines

Interterritorial Council NHS (since 1986)

- Conditions and minimum requirements aiming to maintain the confluence, harmonization, coordination and cohesion between all the regional initiatives and immunisation recommendations

ICNHS → Recommendations for Spain

IIS in Spain

Study in 2015, updated 2020

3

GENERAL CHARACTERISTICS

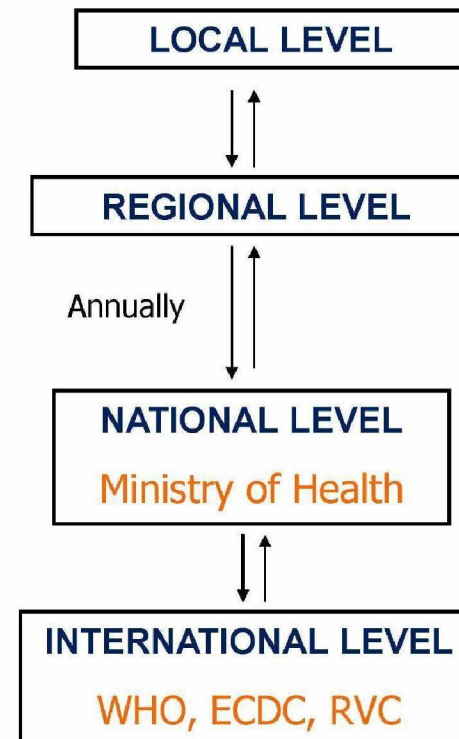

□ 19 IIS/IR:

- Person unique identifier
- Record life-course vaccination data
- Record vaccination data of immigration
- Vaccine characteristics
- Date of administration

HETEROGENEITY

Immunisation coverage. Algorithm for reporting

- **Annual coverage notification** since 1992 (IC agreement)
 - Common coverage indicators
 - Updated in 2017
- **Data collection and analysis**

Why a COVID-19 registry?

5

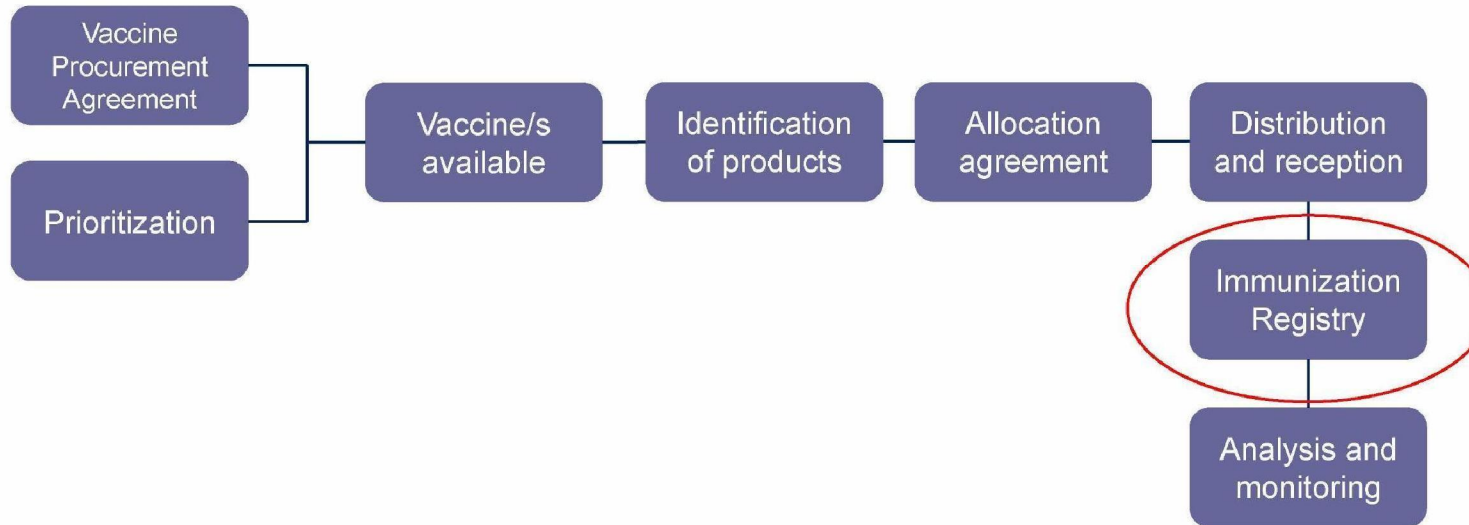

- European Commission – Advance Purchase Agreements
- **MoH:**
 - Procurement of COVID-19 vaccines
 - NITAG prioritization → agreed allocation to Regions
- **Development of a COVID-19 registry of the NHS:**
 - Real time monitoring: distribution and administration
 - Opportunity to drive improvement of regional IIS/registries
 - Automated analysis and information (MoH and regions)

COVID-19 vaccination registry

6

- WG functionals - IT (MoH and Regions/Cities)
- **Objective:**
 - ▣ To develop a COVID-19 registry of the NHS, built on best practices from the Regions and previous joint experiences
- **Characteristics:**
 - Agile response to all those who are part of the NHS
 - Rapid development, expected by end November 2020
 - Adaptive capacity to be able to incorporate future changes
 - Technical, syntactic and semantic interoperability
 - Compliance with an agreed Clinical Information Model

COVID-19 vaccination Information System flow

COVID-19 vaccination registry

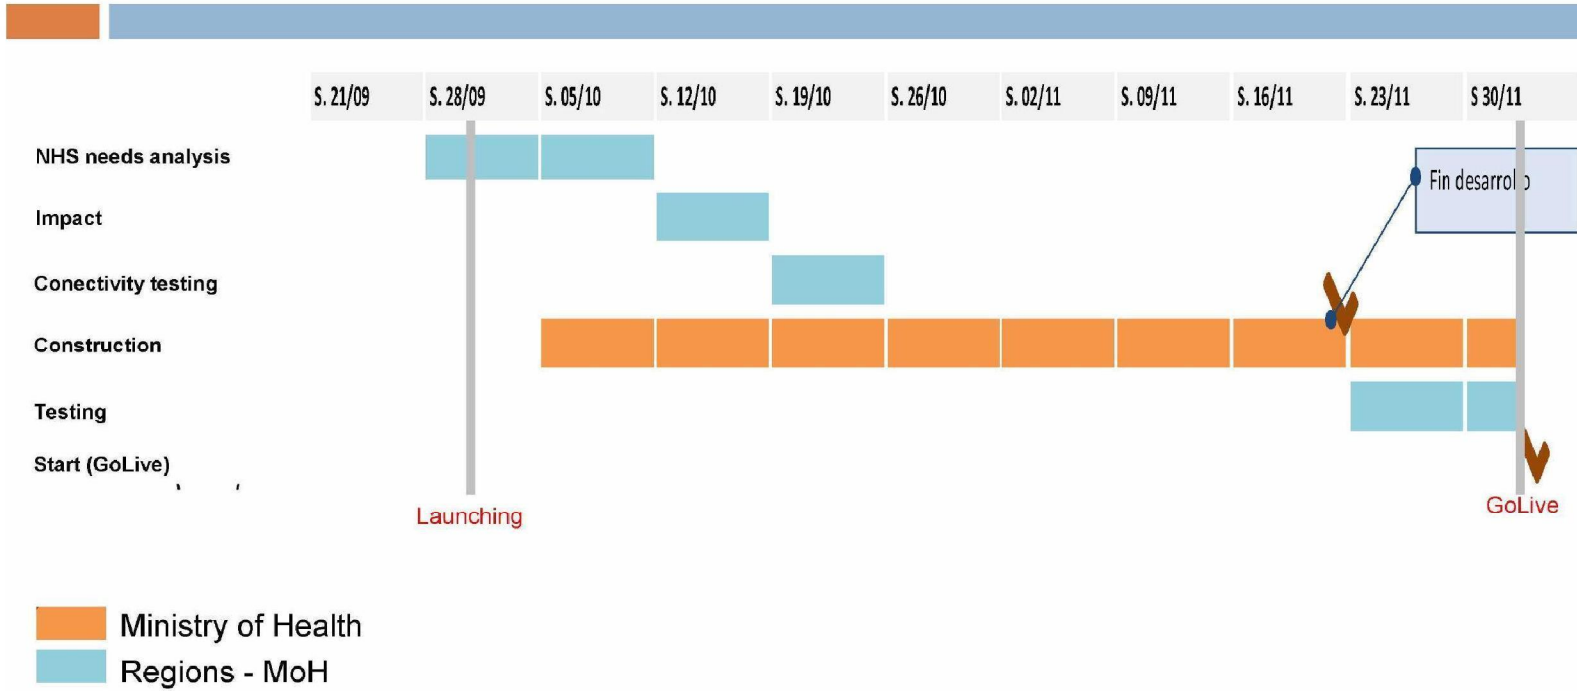

Data on COVID-19 vaccination can be uploaded daily from regional registries in Excel or CSV formats

The .xlsx or .csv files will be uploaded daily through **SQL Service Integration Services** in a central repository of the informational module. This information will be **pseudonymize** in the repository itself

The Central repository can be updated daily with the exploitation model defined in **Power BI**. Reports in special formats pdf, ppt can be generated in **SQL Server Reporting Server**

COVID-19 vaccination registry – Project timeline

COVID-19 vaccination registry

10

- **Variables:**
 - Unique identifier – pseudonymized at MoH level
 - Date of birth
 - Geographical area of residence
 - Vaccine given, date of administration, and provider
 - Reason for vaccination
- **Functions:**
 - Vaccination uptake monitoring
 - Coverage by population characteristics and region
 - Information of refusal of vaccination
 - Source data for research

COVID-19 vaccination registry
