Dear 5.1.2e

Thank you. We will inform RIVM of this new information immediately. If this has impact on the travel advice, we will let you know.

Kind regards,  
 5.1.2e

**Onderwerp:** Sweden - statistics related to travel advice

Dear 5.1.2e

I understood that the conversation between 5.1.2e and 5.1.2e unfortunately was postponed until next week.

However, it is important for us to provide you with updated information about the Swedish Covid-19 situation related to your travel

advice.

I'm not sure whether you are the right person to handle this but otherwise you might be able to forward this to responsible colleagues at RIVM. I have also been in contact with [REDACTED] and [REDACTED] at Minbuza who are in charge when [REDACTED] is on vacation.

At this moment, Sweden has 13-15 infected cases per 100 000 inhabitants the last 2 weeks and according to your thresholds, this should be sufficient for not being on your "code orange".

Please find more information here (in Swedish but translated below):

<https://www.folkhalsomyndigheten.se/globalassets/statistik-uppfoljning/smittsamma-sjukdomar/veckorapporter-covid-19/2020/covid-19-veckorapport-vecka-31-final.pdf>

During week 31, slightly more cases were reported than in the previous week, but the number is still lower than the average for the last three weeks. The increase is seen mainly in the group 20-29 years. Both the number of newly confirmed cases and the number of new intensive care patients with confirmed covid-19 remain at the same level as at the end of March. The number of tests performed for analysis of ongoing infection continued to decrease and three percent of the tests were positive, which is at the same level as the previous week. **Nationally, the incidence was 15 cases per 100,000 inhabitants for week 31.** Based on data available so far for week 29, the deaths were nationally within the normal range for the season, but regionally mortality is seen in central Norrland (Västernorrland and Jämtland), read more in the section Deceased.

[https://www.folkhalsomyndigheten.se/globalassets/statistik-uppfoljning/smittsamma-sjukdomar/veckorapporter-covid-19/2020/covid-19-veckorapport-vecka-30-final\\_korr.pdf](https://www.folkhalsomyndigheten.se/globalassets/statistik-uppfoljning/smittsamma-sjukdomar/veckorapporter-covid-19/2020/covid-19-veckorapport-vecka-30-final_korr.pdf)

During week 30, all surveillance systems show a continued declining spread of infection. Both the number of newly confirmed cases and the number of new intensive care patients with confirmed covid-19 are now at the same level as I will end in March. The number of tests performed for analysis of ongoing infection decreased in price with the week before and three percent of the tests were positive. **Nationally, the incidence was 13 cases per 100,000 inhabitants for week 30, a decrease of 35 percent.**

Looking forward to hear from you regarding this – I'm of course willing to provide you with more information or statistics if needed. Thank you!

Kind regards,

[REDACTED]
