[Case report v18122020.docx](#)

Hi, [redacted]

you might have heard about the discussion on a COVID-19 possible vertical transmission case (mother with COVID-19 and per vias delivery with viral RNA detection in the placenta). It came in as a signal for the Signaleringsoverleg, but was found too specialised to be included.

We contacted the hospital with [redacted] and later agreed that I will tutor their master's student [redacted] on writing a case report.

They sent in samples and [redacted] tried to sequence them (still awaiting the final results). Once that is ready, we can wrap it up for publication. I was thinking to try Clinical Infectious Diseases first, and if rejected an ob-gyn journal.

Would you have some time to look at it?

Attached is the current version of the case report – I did a second round of corrections on it right before the holidays and Sharon should be now updating the timeline figure and checking with their pathology for a supplementary photo of the placenta.

All the best,

[redacted]
