Hi,

Here's the figure. DALY/100k is only a bit higher than what you had calculated and plotted for your presentation; this is because this figure includes all (estimated) symptomatic cases to 31 Oct, not just OSIRIS cases to 30 June.

Caption would be:

[redacted] 5.1.2i

The difference in order of magnitude with DALY/100k for healthcare workers and other occupation categories is mostly to be explained by the exclusion of persons aged 70+ years from the 'by profession' plot.

Groeten [redacted]
