Subject: Analysis of PH Measures, COVID-19, and respiratory surveillance

Dear colleagues,

We have been collecting data on travel restrictions and public health interventions used in countries to slow the spread of COVID-19, and are starting to explore the use of ongoing respiratory disease surveillance systems to evaluate the effect. It is early days and although we cannot conclude much about effectiveness at this point, we wanted to share the descriptive analysis to date in order to get your thoughts and impressions going forward. Since the analysis was limited to countries with earliest rise in cases, this is a limited group of country participants at this point.

Please join us for a WebEx on Thursday, 2 April at 3:30pm CET. We will send out the slides before the call.

Best regards,

High Threat Pathogens Team
