Thanks
 I have added to [redacted] versions.

I don't think this statement quite captures our very detailed discussion yesterday. I have inserted a single comment after the section on the age bands which tries to do this.

Perhaps we could insert this brief section

`It is advised that, upon completion of vaccination of each of these age bands, a brief pause and review is undertaken before progressing to the next age band. Choices regarding deployment of vaccine may vary between bands in light of emerging international epidemiology of COVID-19 disease and changes in the predicted benefit:risk ratios of vaccination in in these age groups.`
