[Fluxergy COVID-19 Sample-to-Answer-RT-PCR Test Two Page Overview CE Pending 1-21-21.pdf](#)

Hello [REDACTED]

I am contacting you from Fluxergy, an IVD manufacturer of point-of-care products. Our platform allows for 1-hour RT-PCR testing for COVID-19 with a sample-to-answer workflow.

- CE Mark scheduled for Feb 1, 2021
- Currently can test NPS samples and are validating NP and saliva
- Simple workflow on a compact Analyzer for use in laboratory or field settings
- Ideal for rapid testing applications such as emergency, outpatient procedures, urgent care, workplace screening, and community level testing

In the future, our platform will be capable of reading multiple types of diagnostic tests in addition to RT-PCR, specifically:

- Immunochemistry
- Chemistry
- Cytometry

Our product development pipeline for the next two quarters includes an antibody test for IgG, a combined combo test for SARS-CoV-2 RNA + COVID-19 IgG, and a respiratory COVID-19/Influenza/RSV PCR panel. We are also highly interested in collaborating on products outside of COVID-19 that can leverage our platform's multimodal potential, such as for example kidney or inflammation panels for chronic conditions.

Please let me know if you have a need for our system or if you'd like to schedule a time for a virtual demo to discuss the platform further. [Please click here to schedule a meeting.](#)

Have a wonderful day,

[REDACTED]
