[210131 TNA Manuscript Revised](#) [redacted].docx

Dear [redacted] and [redacted]

We recently received the editorial assessment of our paper on the training needs assessment. We are pleased to share that, despite some suggested revisions, they invited us to resubmit the paper after revisions before the 5th of February.

I already revised the paper based on the reviewers comments. The reviewers were rather positive. The majority of adjustments that had to be made involved further clarification of the procedure and the interpretation of the results as described in the discussion section. Please find the reviewers feedback below this email. And please find attached the revised paper with track changes. **If you have any comments or suggestions, please let me know before Thursday (4 Feb).**

A specific question of one of the reviewers was to estimate the number of designated points of entry in Europe. As a conclusive list is unknown to us, would you have an approximate number at this time?

We are looking forward to your reaction.

Kind regards,

[redacted]
