

Dear Members:

Attached, is a statement for implementation policy-making.

It describes oustanding signaling relationships of the viral DNA that lead the COVID19 to confuse humans with swine. This follows pork-DNA consumption and is the basis for gastrointestinal chronic reinfection, before- and after patient-recovery. COVID19 virus DNA signals create error in human genetic signaling pathways and lead to the resultant survival-failure (death).

Commercial distribution of pork-DNA should be banned from hospital and clinics as a priority, and on behalf of chronically-inflammatory impaired and vulnerable patients who will have limited chance of survival.

An action plan is described in the content of this statement.

The goal is to show how the Netherlands can wipeout any future assault by the COVID19 and thereby demonstrate guard of public health and economic growth publicly before the March 30 deadline.

Thank you for your attention. I look forward to your reply.
