Subject: RE: Update modelling COVID-19
Received: Wed 4/29/2020 2:32:56 PM

Dear all,

My apologies that I missed the meeting yesterday, I was attending a web conference and didn't check the RIVM email after that…

Points below are updates from me. If there is anything, please kindly let me know.

Asymptomatic ratio

5.1.2h

I'm sharing a result of a rough estimate of overall asymptomatic ratio given infection, based on repatriated flight data.
As previously talked with 5.1.2e and 5.1.2e, I don't have good estimates on the asymptomatic proportion per age-group, but will update it in this folder if anything.

Inventory of transmission clusters in Japan

5.1.2h

Please note that there are a lot of inconsistencies in original files, the ministry's and prefectural offices' reports. This includes 23 clusters.

Evidence for the effectiveness of intervention measures

5.1.2h

Now, with 5.1.2e I'm writing a paper that proposes utilizing human challenge studies to measure the effect of heterogeneous susceptibility and vaccinations.
Also, you can find previous human challenge data of (common cold, 229E and OC43) coronaviruses in the folder.

Best regards,
5.1.2e

Subject: Update modelling COVID-19

Hi all,

I scheduled a meeting today at 4pm, so that everybody from the modelling-group working on COVID-19 can shortly tell what is everybody doing.
