Dear Brighton Collaboration Members,

The Brighton Collaboration Viral Vector Vaccine Safety Working Group (V3SWG) invites you to review the Nucleic Acid (RNA and DNA) Vaccines template.

The V3SWG, launched in 2009, has adopted such a standard template for the characterization of vectors ([see Vaccine Safety Quarterly \[VSQ\], pp.7](#)).

In 2020, the development of vaccines for COVID-19 is appropriately occurring at unprecedented speed. Several DNA and RNA vaccine platforms are among the most advanced COVID-19 vaccines in development. The Brighton Collaboration V3SWG have therefore developed a specific template for nucleic acid vaccines that the Coalition for Epidemic Preparedness Innovations (CEPI) and other key stakeholders will use to evaluate and communicate the benefit risk of vaccines using these nucleic acid platforms.

Now, the newest template, the Nucleic Acid (DNA and RNA) Vaccines is ready for a wider review. We invite you to assist in the peer review of these template. The template is attached to this e-mail. You can provide comments via the following link by **April 21, 2020**: -

[REDACTED] 5.1.2h
 The V3SWG will revise the template upon review of comments received, as appropriate, submit it for publication and share it widely to developers with nucleic acid vaccines for completion, use, and publication. Individuals with technical expertise in nucleic acids (DNA and RNA) and interest in vaccine safety are welcome to contact the [REDACTED] 5.1.2e @gmail.com for possible membership in the V3SWG.

Thank you in advance and best wishes,

The [REDACTED] 5.1.2e
