Subject: Verduidelijking aim project microbiome PIENTER-3
Received: Thur 5/7/2020 3:36:03 PM

Hi [redacted]

Hierbij de verduidelijking van de vraagstelling voor het project rondom pienter-3 en de speeksel afname. Het initiatief van het project ligt bij EPI en IIV en IDS zou aangehaakt worden bij het microbiome werk. Het voorstel is ook bekend bij [redacted].

"Since the majority of infections occur without hospitalization, the goal of this project is to study the role of the respiratory microbiome in susceptibility and symptoms of COVID-19 among non-hospitalized people in open Dutch population using a prospectively followed non-hospitalized population with pre and post COVID infection (defined by serologically as well as by virus detection). This in relation to environmental factors like proximity to intensive livestock farming and air quality."

Warm regards / Met vriendelijke groet,

[redacted]
