

Selection of patients to be invited for studies of the national postCOVID expertise/research; selection will be based upon the information (PROMs etc) in the baseline and follow-up/update surveys. Data collection for these new studies will most often be in separate systems (outside the portal system).
Two routes to invite patients:

Preferred route if "verwerkersovereenkomst" is signed: researcher user interface, with direct access of researchers to selected patients and their contact info, so that researchers can contact patients. Should it be possible to download a list of email addresses?

If no "verwerkersovereenkomst" is signed yet: email invitation to selected patients by the portal system, with contact info of the researchers, so that patients can contact them. Linking code is provided to the patients in the invitation email, for data linking after signing of a "verwerkersovereenkomst".
