Hoi 5.1.2e

Je vroeg er naar.... *, zie hieronder

5.1.2e zijn ook niet de eerste de beste onderzoekers...

Groetjes,

5.1.2e

Subject: Re: Update: ferret study with T-cell inducing influenza vaccines

Dear 5.1.2e

thank you very much for this.

We have been working very hard on Covid-19 also. In fact we have developed a VLP vaccine (not S-FLU related) with 5.1.2e here and are now collaborating with a pair of companies to produce a GMP version. Would you be interested in testing this in your ferret model? We get neutralising titres for wt virus ~1:6,000 to 1:8,000 in mice and ~1:1000-1:4000 in pigs.

Best

Dear all,

I hope you are healthy and doing well these days. Who could have thought that our type of work would gain so much in significance during the last few months. A reason why this specific project has been silent for a while. We had to change course and worked on the development of a SARS-CoV-2 ferret model, of which the in life phase ends tomorrow. It has been a really hectic period and I guess you have all experienced the same. 5.1.2e lately had some time in between to work on the results and we therefore send you an updated version. We now also included results for the perfused lungs, Spleen and Bone marrow. We didn't really go into drawing conclusions yet. Please consider the control, as in some tissues we experience a high background, depended on the type of stimulation (virus vs peptide). It will still be quite busy with SARS2 the coming time, but slowly we will have more time to work on this project. I hope you all understand the delay and would like to thank you all again for your participation in this project. We'll keep in touch.

Kind regards,

5.1.2e
